

JUNAID WAHEED

FULL-STACK DEVELOPER | AI INTEGRATION

+92 317 4311693 ◊ junaidwaheed827@gmail.com ◊ [LinkedIn](#)

SKILLS

Frontend Development React, Next.js, JavaScript, HTML/CSS — building performant, responsive web apps

Backend & APIs Node.js, Express.js, Flask (Python) — REST API design, server-side logic, integrations

AI & LLMs Hugging Face, Prompt Engineering, RAG pipelines, AI-powered feature development

Databases PostgreSQL, MySQL — schema design, querying, data modeling

Tools & Workflow Git, GitHub — version control, collaborative development, CI basics

Soft Skills Client communication, requirements gathering, MVP delivery, iteration, teamwork, leadership

EXPERIENCE

Independent Full-Stack Developer, Freelance

July 2024 – Present

- Built client-facing web applications using React and Next.js, delivering production-ready MVPs from requirements to deployment.
- Developed AI-powered features and automation tools using Python and Flask/Fast API — including LLM API integrations, prompt pipelines, and backend services for client products.
- Collaborated directly with clients across the full product lifecycle: discovery, scoping, development, feedback loops, and iteration.

Front-End Developer, Meeru Interactive

May 2023 – June 2024

- Built and maintained production web applications using React and Next.js, with a focus on user experience, performance, and maintainability.
- Integrated React with WordPress REST APIs for dynamic data delivery.
- Slashed page load times by 40% by decoupling the frontend from the CMS. Redesigned user workflows, lifting platform conversions and sign-ups by 25%.
- Collaborated in an agile team environment, shipping features across multiple sprint cycles while maintaining code quality standards.

PROJECTS

Dispatch Book, Trucking Operations SaaS — In Development

- Designing and building a multi-tenant SaaS platform to replace WhatsApp and spreadsheets for owner-operators managing 1–5 trucks in the US and Canada.
- Web portal (Next.js) for dispatchers: load management, live driver tracking, Gross/RPM financial reporting, role-based access for Owner, Dispatcher, and Driver roles.
- Mobile app (React Native / Expo) for drivers: load assignments, one-tap status updates, POD/BOL uploads with offline queuing for dead zones.
- Backend on Supabase — real-time subscriptions, row-level security for tenant isolation, file storage for delivery documents.

Key Forge, AI-Powered Product Configurator

- Built a e-commerce configurator featuring a real-time 3D mechanical keyboard model with animated exploded-view assembly, post-processing visual effects (Bloom, Vignette), and physically-based materials using React Three Fiber and Three.js.
- Integrated Mistral AI as a virtual sales specialist with streaming responses and function-calling tool use, enabling the AI to directly mutate the 3D configuration state — swapping parts, toggling views, and highlighting components — in response to natural language.

- Stack: Vite, React, React Three Fiber, @react-three/postprocessing, Mistral AI API, Zustand.

TRAINING & CERTIFICATIONS

- IBM AI Developer Professional Certificate [↗ View credential](#)
- Foundations of AI and Machine Learning — Coursera [↗ View credential](#)

EDUCATION

Bachelor of Science, Computer Science, Virtual University of Pakistan — Pakistan 2021 – 2025
